

MULTI-LANGUAGE INTERFACE

LOCALIZE IZENDA FOR OVER A DOZEN LANGUAGES.

IzendA provides an add-on customization package to localize the Izenda UI, Field Names, and the data itself into other languages.

WHAT ARE THE BENEFITS?

Global customers expect the reporting function of your software to be localized into their language. The Localization Pack delivers language support to your audience without the cost and complexity of internally working with languages that the development team is not familiar with.

WHAT PARTS OF THE INTERFACE BECOME LOCALIZED?

The majority of the user interface elements in the Report Designer, Report Viewer, and Report List are localized with the Language Pack. In addition, field names get localized and drive headers in the report. The Settings.aspx page and any developer-oriented resources or messages will remain in English.

Can I Use a Language That is Not in The Language Pack?

If you didn't find the language you want to use in the Language Pack you can contact your sales rep or sales@izenda.com to get it.

What Needs To Be Installed on The Server or Browser?

The Microsoft Language must be installed on the server as well as the browser for the fonts to display properly. Please download the language file from Microsoft's web site. The Izenda Localization Pack assumes that the server and user have the proper resources installed.

WHAT DOES IT COST?

We're happy to discuss this valuable add-on for your business intelligence. Contact your sales rep or sales@izenda.com for details on the cost of this and other add-ons to Izenda Reports.
